

Devops VSCode- To write an ASP .Net application code. Git- We will check the .NET code into the GIT Repository Azure Devops- We will use GIT to push the code to Azure Repos repository. Then there are different pipeline in here such as build pipeline to deploy to development, release pipeline to deploy to QA. Azure Portal- The environment in the Azure Portal contains an azure container Registry where we will push the docker image where will have the application running on App services. Lastly there will be webhook that pulls the docker image into the app services as soon as its been deployed into the azure container registry.
